ABOUT ME

Backend Developer focused on Java and Spring Boot, building secure, well-modeled REST APIs on PostgreSQL. I take projects end to end, from schema design and a Next.js frontend to CI on GitHub Actions and deployment on Azure, and I aim to grow toward DevOps and cloud infrastructure. Seeking a Backend Intern/Fresher role.

SKILLS

- **Backend:** Java, Spring Boot, Spring Data JPA, Spring Security, REST API, JWT
- **Database:** PostgreSQL, SQL Server, Redis, Flyway
- **Frontend:** TypeScript, JavaScript, React, Next.js, Tailwind CSS, HTML/CSS
- **Tools & Cloud:** Git, GitHub Actions, Docker, Postman, Maven, Azure, Vercel
- **Concepts:** OOP, RESTful Design, MVC, Clean Architecture

EDUCATION

Major: Information Technology — Sai Gon University
GPA: 3.0 — 2023 – Present

PROJECTS

QuikTech POS — Multi-tenant POS & Inventory SaaS | Demo, GitHub — May 2026 – Oct 2026
Java 25, Spring Boot 4, PostgreSQL, Redis, Flyway, Docker, Azure, Next.js

- Built a multi-tenant POS & inventory SaaS where one business runs many stores, with scoped roles from owner to staff and system admin
- Designed a 35+ table PostgreSQL schema (Flyway) for orders, returns, purchasing, multi-warehouse stock, debts and audit logs
- Secured the API with JWT access/refresh tokens and Redis-cached role lookups; Bucket4j rate limiting (IP, user, failed logins) and idempotent writes
- Implemented subscription billing (plan limits, QR bank-transfer invoices) with scheduled expiry, materialized-view dashboards and GIN full-text search
- Deployed on Azure (App Service, PostgreSQL); built the VI/EN Next.js frontend on Vercel

HRM System — HR & Payroll Management | Demo, GitHub — Sep 2026 – Present
Java 25, Spring Boot 4, Spring Security, PostgreSQL, Flyway, Azure, Next.js

- Built an HR REST API for multi-branch companies: employee records, org tree, attendance, leave, and payroll with insurance and progressive income tax
- Designed time-bound, scoped RBAC (self, department, location, company) with grant/revoke overrides, enforced via @PreAuthorize and JPA Specifications
- Modeled payroll as a state machine with pessimistic locks, resetting affected periods on retroactive changes; rotating hashed refresh tokens with reuse detection
- Designed a 33-table PostgreSQL schema (Flyway) with EXCLUDE USING GIST constraints against overlapping date ranges; CI on GitHub Actions, deployed to Azure
